Header Analyzed

Email Subject: Re: Regarding flipkart job [Analyze New Header](#)

Copy/Paste Warning

Copy/Pasting a header works for most people, but sometimes it can cause problems with things like DKIM Validation. For the best results, use our [Email Deliverability tool](#)

Delivery Information

- DMARC Compliant (No DMARC Record Found)
- SPF Alignment
- SPF Authenticated
- DKIM Alignment
- DKIM Authenticated

Relay Information

Received	0 seconds
Delay:	

2. Authentication Analysis

Summary of authentication results extracted from headers:

Mechanism	Result / Notes
SPF	PASS (mail from hr@flipkart.work permitted from 188.121.53.225)
DKIM	Not present / no DKIM-Signature header detected in provided headers (unable to validate)
DMARC	No DMARC result present in headers (policy not observable from provided headers)

Notes:

- SPF passing means the sending IP (188.121.53.225) is authorized to send mail for the domain flipkart.work according to that domain's SPF record. This does NOT prove the message is legitimate — SPF is only one signal and can be configured by the owner of the suspicious domain.
- Absence of DKIM and absence of DMARC policy results reduce the confidence that the mail is from an authoritative Flipkart mail system.
- Message-ID points to "ap1.myprofessionalmail.com" and the received server is in a secureserver.net (hosting provider) range — both indicate the message likely originated from a third-party/hosted mail service rather than an official Flipkart infrastructure.

3. Header Trace (Received Path)

Extracted hop sequence (most relevant entries):

Hop	Mail Server (hostname / IP)	Notes / Timestamp
1	sxb1plwbeout05.prod.sxb1.secureserver.net (188.121.53.225)	Originating SMTP relay to Gmail (Mon, 12 Feb 2024 00:40:13 -0800 PST)
2	mx.google.com	Google inbound (final delivery)
X-Originating-IP	49.36.33.214	Client IP recorded in header (may be the web client or originating network)

Interpretation: The message was sent through secureserver.net (commonly associated with hosting/transactional email providers). The sending domain flipkart.work is not the official corporate Flipkart domain (flipkart.com).

4. Email Body / Social-Engineering Analysis

Job Description content (as provided):

Job Description :- Work From Home Customer Service Representatives

Date Of Joining 21 Feb 2024

Salary : 24 K + PF (On roll)

Timing 10 am To 6 pm (Weekly Off Rotational)

Responsibilities:

- Responsible for handling the queries and complaints from Flipkart customers on inbound calls.
- Follow procedures methodically to accurately respond to customers on Call.
- Provide quotes and information to customers related to their products.
- Provide information including Delivery time and other queries related to the product.
- Fulfill invoice requests on purchased products.

Online Training Program 16 Feb 2024 . (5 day Online Training Program About The Process

Timing 2 Hr)

For Enrollment Contact 9226887389 .

Quoted reply from recipient was included at the bottom.

Observed social-engineering indicators:

- The email uses the Flipkart brand in the display name but is sent from flipkart.work (different TLD) — a common impersonation technique.
- Generic job offer wording and an instruction to contact a phone number for enrollment. Scams often ask to call or message external numbers to collect payment or personal data.
- No official Flipkart email domain (flipkart.com) used, and no corporate branding assets or verified links present in the headers.
- Request for training/enrollment could be used as a pretext for harvesting personal data or collecting fees.

5. Indicators of Compromise (IOCs)

Indicator	Value / Notes
Sender display name	"Flipkart Pvt.Ltd"
Envelope sender / Return-Path	hr@flipkart.work
Sending IP	188.121.53.225 (sxb1plwbeout05.prod.sxb1.secureserver.net)
X-Originating-IP	49.36.33.214
Message-ID	<15412723.4695942.1707727210689@ap1.myprofessionalmail.com>
Phone number in body	9226887389
Subject	Re: Regarding flipkart job

6. Risk Assessment & Conclusion

Risk rating: HIGH (Impersonation / Job-offer scam indicators present)

Conclusion:

- Although SPF passes for the domain flipkart.work, that domain is not the legitimate flipkart.com domain and appears to be used to impersonate Flipkart.
- The message originated from a hosting/transactional mail provider (secureserver.net) and contains social-engineering characteristics typical of job-offer and recruitment scams.
- The presence of an external phone number and a training/enrollment request increases the likelihood this is a scam intended to harvest personal data or solicit payment.

Confidence: High (based on domain mismatch, sending infrastructure, and message content).

7. Recommendations & Next Actions

- Quarantine the message and remove it from user inboxes to prevent accidental interaction.
- Block the sender email (hr@flipkart.work) at the mail gateway and block the sending IP 188.121.53.225 at the perimeter/firewall if appropriate.
- Add flipkart.work and the sending IP to organization blocklists and to threat intelligence platforms (e.g., MISP, VirusTotal).
- Do NOT call the phone number in the message. If a user already called or shared info, treat as potential compromise and escalate to incident response.
- Search mail logs for other messages from the same Return-Path / sending IP / Message-ID pattern and quarantine similar messages.
- Educate the recipient and wider team about impersonation scams — verify corporate domains (flipkart.com) and avoid responding to unsolicited job offers that use alternative domains.
- If actionable, report the domain to registrar/hosting provider abuse contacts and to major providers (Google Safe Browsing) so it can be investigated.
